Quality of care

- IPC relies on application of clinical guidelines
 - Reduces variability, improves quality
- Clinical guidelines informed by systematic reviews of available evidence
 - Benefits and harms of alternates
- No previous study on the strength of the evidence that inform IPC guidelines

Murad, M. Het al (2016). *BMJ Evidence-Based Medicine*, 21(4), 125-127

3

Aims

1. To describe the diversity of professional and government sponsored infection prevention and control guidelines
2. Where recommendations are made within professional and government sponsored infection prevention and control guidelines, to describe:
 - a. the breadth and diversity of recommendations contained in these guidelines
 - b. the strength of the evidence under-pinning recommendations
 - c. the infection prevention and control topics with the lowest and highest strength of recommendations

4

Method

Search known government and professional organisations

- The Centers for Disease Control and Prevention (CDC)/Healthcare Infection Control Practices Advisory Committee (HICPAC)
- Infectious Diseases Society of America (IDSA),
- Society for Healthcare Epidemiology of America (SHEA)
- Association for Professionals in Infection Control and Epidemiology (APIC)
- Australian National Health and Medical Research Council (NHMRC)
- National Institute for Health and Care Excellence (NICE)
- National Health Service (NHS) England,
- Infection Prevention Society (IPS),
- European Society of Clinical Microbiology and Infectious Diseases (ESCMID),
- World Health Organization (WHO) and the
- Public Health Agency of Canada (PHAC)

Other guidelines identified in this search

5

Criteria

Inclusion

- published from January 2009 to April 2019
- published with the intent of being a national guideline or for national adoption
- included recommendations for persons of all ages in healthcare settings
- published in the English language;
- used a formal grading system (using any criteria, e.g., Grading of Recommendations Assessment, Development and Evaluation (GRADE)) to show the strength of the recommendations underpinning the guideline;
- focused on specific infections, e.g., epic3 guidelines for preventing healthcare-associated infections or those targeting specific aspects of infection control, e.g., hand hygiene and vascular access device

6

Criteria

Inclusion

- published from January 2009 to April 2019
- published with the intent of being a national guideline or for national adoption
- included recommendations for persons of all ages in healthcare settings
- published in the English language;
- used a formal grading system (using any criteria, e.g., Grading of Recommendations Assessment, Development and Evaluation (GRADE)) to show the strength of the recommendations underpinning the guideline;
- focused on specific infections, e.g., epic3 guidelines for preventing healthcare-associated infections or those targeting specific aspects of infection control, e.g., hand hygiene and vascular access device.

Exclusion

- primarily concerned with diagnosis and/or treatment of infection; or if the guidelines were focused on a particular jurisdiction, e.g., a State in a country.

7

Criteria

Inclusion

- published from January 2009 to April 2019
- published with the intent of being a national guideline or for national adoption
- included recommendations for persons of all ages in healthcare settings
- published in the English language;
- used a formal grading system (using any criteria, e.g., Grading of Recommendations Assessment, Development and Evaluation (GRADE)) to show the strength of the recommendations underpinning the guideline;
- focused on specific infections, e.g., epic3 guidelines for preventing healthcare-associated infections or those targeting specific aspects of infection control, e.g., hand hygiene and vascular access device.

Exclusion

- primarily concerned with diagnosis and/or treatment of infection; or if the guidelines were focused on a particular jurisdiction, e.g., a State in a country.

Definition

An infection prevention and control clinical guideline was defined as a document that evaluated the current evidence base of an infection prevention and control topic or topics and used a formal grading system (e.g., GRADE) to show the strength of the recommendation(s) stated

8

Data extraction

- publication year
- country of origin
- name of guideline
- publisher
- source and each stated recommendation(s)
- type of grading system used and strength of the recommendation
- for each recommendation, the broad infection prevention and control category was determined (these were collapsed into broader categories)

9

Data extraction

Broad categories

- | | |
|-----------------------------|--|
| • hand hygiene | • transmission-based precautions |
| • cleaning | • patient-focused strategies |
| • sterilization | • personnel |
| • education | • infection prevention and control program |
| • devices | • outbreaks |
| • screening | • vaccination |
| • implementation | • sharps |
| • surveillance | • ventilation |
| • skin antisepsis | • reporting |
| • antimicrobial prophylaxis | |

10

Strength of recommendation

Level 1 - meta-analyses, systematic reviews of randomized controlled trials (RCTs)

Level 2 - well-designed RCTs, strong recommendation from high-quality evidence

Level 3 - well-designed non-randomized studies including observational studies (case-control, cohort and cross- sectional), moderate evidence

11

Strength of recommendation

Level 1 - meta-analyses, systematic reviews of randomized controlled trials (RCTs)

Level 2 - well-designed RCTs, strong recommendation from high-quality evidence

Level 3 - well-designed non-randomized studies including observational studies (case-control, cohort and cross- sectional), moderate evidence

Level 4 - descriptive studies, expert opinion, low-quality evidence

Level 5 - poor/insufficient evidence, very-low-quality evidence

Level 6 - recommended best practice, good practice point

Level 7 - unresolved issue, no recommendation

Level 8 - legislated requirement

12

Results

- 31 guidelines were included
- Majority published in 2013 (16%) and 2014 (26%)
- USA 36%
- Canada 29%

Grading

- 19% used GRADE
- 23% incorporated elements of GRADE

13

25

26

Summary

- Majority of IPC categories supported by Level 4
 - Descriptive studies, expert opinion, low quality evidence
- Hand hygiene, skin antisepsis, antimicrobial prophylaxis supported by highest Level 2
 - Well designed RCTs, strong recommendation from high quality evidence
- Lowest level of evidence (7 & 8)
 - reporting, IPC programs, sterilisation

27

Summary

- Strength of most IPC guidelines based on low quality evidence
- 60% based on observational studies
- Lack of high quality studies means “strong” recommendations cannot be made

28

Limitations

- Limited to past decade
- Inability to review data underpinning the recommendations
- Levels of strength not validated

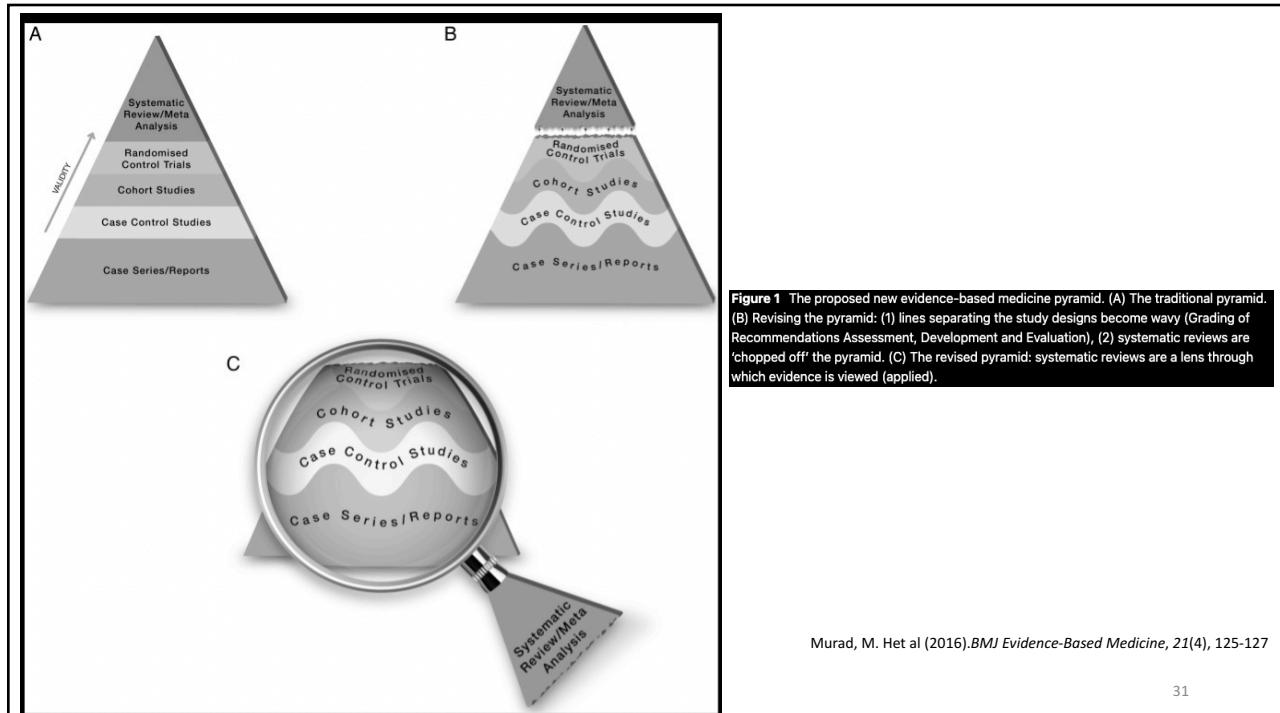

Strength - inclusion of most commonly used and cited guidelines

29

Conclusion

- Vast numbers of guidelines national and international bodies
 - Duplication, confusion and practice variation
- Opportunity for multinational collaboration
- Establish Research priorities
