Principles of Transmission*

- Influenza viruses are highly contagious and transmitted easily by large-particle droplets from infected people and via direct contact
- Precautions to stop droplet transmission are the cornerstone of influenza prevention (besides vaccination)
- Transmission requires close contact because droplets do not remain suspended in the air and generally travel only short distances, usually 1 meter or less, through the air

– Adapted from the Draft WHO Guidelines on Hand Hygiene in Health Care, part of the Global Patient Safety Challenge, 1/06

So what's the evidence?

Handwashing Trial in Pakistan

- 25 neighborhoods randomized to handwashing intervention; 11 neighborhoods were control
- One year trial
- Children <5 yrs in intervention homes had 50% reduction in pneumonia (all causes) (95% CI:- 6% to- 41%)
- No difference between plain or antibacterial soap

– Luby SP, et al. Lancet 2005; 366:225-33.

Studies in Child Care Centers (n=6)

| | | |
|--|---|--|
| Butz, 1990 24 day care homes | Alcohol hand sanitizer, diapering pads and gloves | NS difference in URI symptoms |
| Krilov, 1996 School for Down's syndrome | Environmental cleaning, particularly toys | Decreased URI (0.67 vs 0.42/child/mth, p<0.07) |

Studies in Child Care Centers

| | | |
|---|---|--|
| Niffenegger, 1997 Two child care centers | Instructional program on hand hygiene and germs | Fewer URIs in intervention group (p<0.05) |
| Carabin, 1999 52 day care centers | Hygiene program and coliform counts on hands | Reduced rates of URIs (RR=0.8, 95% CI:0.68-0.93) |

Studies in Child Care Centers

| | | |
|--|--|---|
| Roberts, 2000 23 large child care centers (Australia) | Handwashing, aseptic nose wiping | Fewer URIs in children ≤ 24 mths (11.4 vs. 13/child year, $p=0.01$) |
| Ponka, 2004 60 child care centers (Finland) | Handwashing, environmental cleaning, washing toys and linens | ~26% fewer URIs in children < 3 years ($p=0.05$) |

Studies in Schools (n=6)

| | | |
|---|--|--|
| Master, 1997 One school | Scheduled handwashing throughout day | NS difference in absence due to URI |
| Dyer, 2000 One school, cross-over design | Benzalkonium rinse-free hand hygiene product | Reduced URIs by 30.9% ($p=0.02$) and 76% ($p=0.001$) |
| Hammond, 2000 16 schools | Alcohol hand hygiene product | URI absenteeism reduced 19.8% ($p<0.05$) |

Studies in Schools

| | | |
|----------------------------|-----------------------------------|--|
| White, 2001 3 schools | Benzalkonium hand hygiene product | Absenteeism from infection reduced 33% |
| Guinan, 2002 5 schools | Alcohol hand hygiene product | 50.6% reduction in absenteeism ($p<0.001$) |
| Morton, 2004 One school | Alcohol hand hygiene product | 43% reduction in absences ($p=0.005$) |

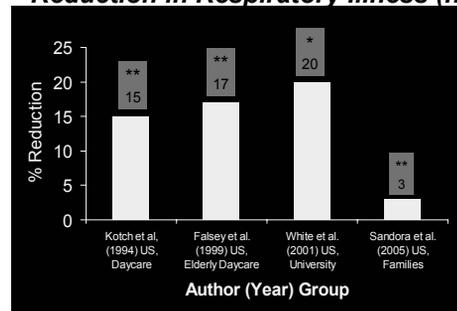

Other Study Settings

| | | |
|--|------------------------------|--|
| Falsey, 1999 One senior day care center | Alcohol hand hygiene product | Non-significant difference in URI rates |
| White, 2003 4 college residence halls | Alcohol hand hygiene product | 14.8-39.9% reduction in URI symptoms (all $p<0.02$) |
| White, 2005 As above | Alcohol hand hygiene product | 40% reduction in absences from illness ($p<0.001$) |

Studies in Homes (n=2)

| | | |
|---|--|--|
| Larson, 2004 238 households | Antibacterial cleaning and soap products | NS difference in URI symptoms |
| Santora, 2005 292 homes with child in day care | Alcohol hand hygiene product | 40% reduction in absences from illness ($p<0.001$) |

Alcohol-based Hand Sanitizer Reduction in Respiratory Illness (n=4)

* $P < 0.05$, statistically significant

** Not statistically significant

Summary

- Results for hand hygiene are equivocal but promising, perhaps due to level of adherence to intervention OR the intervention only addressed one of the two major modes of transmission
- Effective practices must target modes of transmission
 - Alcohol to sanitize hands (direct contact)
 - Respiratory etiquette (droplet spread)

To prevent direct contact spread

Rubbing hands with an alcohol-based formulation is the first choice:

- Fast acting and broad spectrum activity
- Excellent microbicidal characteristics
- Lack of potential emergence of resistance
- No sinks, running water or towels needed
- Reduces the time required to perform the action

Other Precautions to Prevent Direct Contact Transmission

- ‘Aseptic’ nose wiping (plastic around the tissue)
- Frequent washing of toys and other objects, particularly those handled by children
- Don’t go to work when ill!

To prevent droplet spread

- Common sense measures such as
 - In case of coughing or sneezing:
 - Use a single-use handkerchief or paper tissue
 - Cough etiquette (cough into your upper arm)
 - Keep persons with respiratory infections at a distance > 1 meter
- Mask/eye protection?

Herbs and Vitamins?

- Vitamin C
- Vitamin E
- Echinacea
- Zinc
- Ginseng

Educational Materials: Hands

A Webber Training Teleclass

Hosted by Paul Webber paul@webbertraining.com

Sponsored by Deb Canada www.debcanada.com

Specific Aims

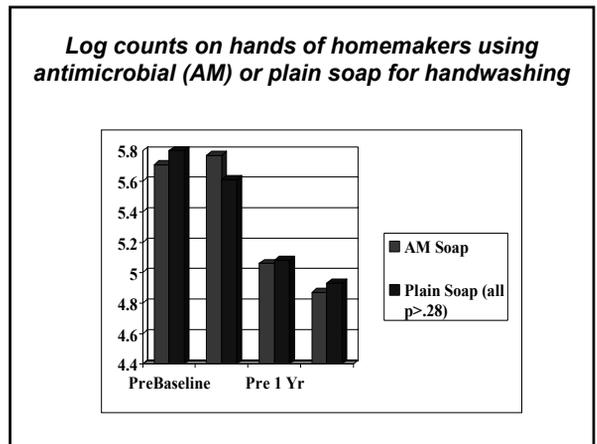

- To compare the impact of three household-level interventions on six outcomes
- Intervention groups:
 - Culturally appropriate educational materials
 - Educational material and alcohol-based hand sanitizer
 - Educational materials, alcohol-based hand sanitizer AND face masks

Study Outcomes

- Incidence and types or strains of virologically confirmed influenza
- Rates of symptoms of influenza and viral URIs
- R_0 , i.e. the number of secondary cases generated by a single infected person in a fully susceptible household
- Self-reported antibiotic use practices for symptoms of influenza and other viral URIs
- Household member knowledge of prevention and treatment strategies
- Rates of influenza vaccination among household members.

Influenza vaccination rates, National Health Interview Survey, 2003

| Risk Group | Influenza Vaccination Rate |
|--|----------------------------|
| Aged >65 years | 65.5% |
| Persons with high risk conditions (e.g. diabetes, emphysema, heart diseases, cancer) | 15.8-46.3% |
| Pregnant women | 12.8% |
| Healthcare professionals | 40.1% |
| Household contacts of persons at high risk | 14.9-38.4% |
| Children aged 6-23 months | Data not provided |

Personal Hygiene Measures to Prevent Influenza Transmission

Dr. Elaine Larson, Columbia University

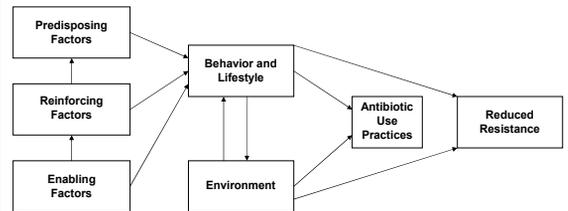

Sponsored by Deb Canada www.debcanada.com

Rates of at least one infectious disease symptom/household month

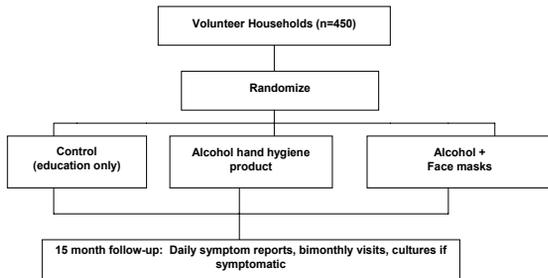

| Symptoms | Unadjusted Rate | | Adjusted * | | | |
|-------------|---------------------|-------------------------|------------|------|--------|----------|
| | Antibacterial group | Non-antibacterial group | P-value | RR | 95% CI | P-value |
| Fever | 10.2 (142/1396) | 11.9 (159/1341) | .21 | .84 | .63 | 1.12 .23 |
| Sore throat | 10.0 (140/1396) | 10.3 (138/1341) | .83 | .95 | .71 | 1.26 .71 |
| Runny nose | 26.8 (374/1396) | 25.6 (343/1341) | .57 | 1.03 | .81 | 1.32 .78 |
| Cough | 23.2 (324/1396) | 23.6 (316/1341) | .88 | .97 | .79 | 1.18 .73 |

* GEE logistic regressions adjusted for number of children under 6, number of people rating health as poor/fair or had chronic conditions, size of the household and number of people spending 40 hours or more outside of house per week.

Precede-Proceed Model: Conceptual underpinnings to identify barriers and facilitators to use of antimicrobials for viral URIs

Study Design

Components of interventions using the Green model

| Group | Model Component | Intervention Strategies |
|--------------------------|--|---|
| Control Group | | Pamphlet and information sheet on where to get flu vaccine |
| Both Intervention Groups | Predisposing factors (knowledge, attitudes, beliefs) | "Flu Prevention Kits" which include above information plus instructions on use of assigned products |
| Hygiene group | Enabling factors (skill development, resources) | Alcohol-based hand sanitizer provided to household members |
| Hygiene and face mask | Enabling factors (skill development, resources) | Alcohol-based hand sanitizer and face masks provided to household members for use among household contacts of persons with symptoms of influenza |
| All study groups | Reinforcing factors | 1) Biweekly phone reports of household symptoms 2) Random simple telephone educational messages (e.g. "Remember that children ages 6-23 months should get a flu shot") 3) Bimonthly home visits by research staff |

Setting

- Northern Manhattan
- About 80% Hispanic, half born outside U.S.
- Lower income, often without health insurance
- Crowded housing (average: 4.5 persons/one bedroom apartment)

Initial Home Visit

- Obtain written consent
- Administer questionnaires:
 - a demographic questionnaire
 - a knowledge and attitude survey regarding causes, prevention strategies and treatments for colds and flu
 - a questionnaire about antibiotic practices
- Orient household members

Personal Hygiene Measures to Prevent Influenza Transmission

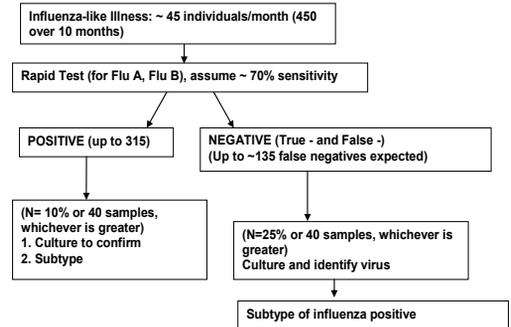

Dr. Elaine Larson, Columbia University

Sponsored by Deb Canada www.debcanada.com

Data Collection

- Daily telephone reporting using ecological momentary assessment technology
- Bimonthly home visits
- Calls to participants not reporting for 48 hours

Algorithm for screening persons with influenza-like illness

The Next Few Teleclasses

- | | |
|-------------|--|
| January 25 | Twenty First Century Plagues ... with Prof. Robert Pratt, Thames Valley University |
| February 8 | Influenza – Of Poultry, Pets and People ... with Dr. Corrie Brown, University of Georgia |
| February 15 | Fresh Produce and Human Pathogenicity ... with Prof. Keith Warriner, Guelph University |
| February 21 | Infection Control in the Endoscopy Clinic ... with Dr. Richard Everts, Nelson Marlborough Health Service |
| February 22 | Best Practice for Hospital Construction Management ... with Andrew Streifel, University of Minnesota |

For the full teleclass schedule – www.webbertraining.com
For registration information www.webbertraining.com/howtoc8.php

- Save More Than 30% On Teleclass Registration Fees

- One registration for all 2007 teleclasses
- Access every live teleclass in 2007
- Automatic free registration for all teleclass topics added mid-season
- Support infection control education in developing nations
- Receive a copy of all 2006 teleclass recordings on CD
- Access private teleclass recordings & notes, available only to Full Year Subscribers

2007 Full Year Subscription
